# YAKSHA HEALTH APP WITH JAVASCRIPT AND CYPRESS

Mymedic automation using cypress

## **Usecase summary**

Project Name: healthapp.yaksha app - Medical Record Management System

Use Case Summary: healthapp.yaksha is a healthcare application designed to manage Electronic Medical Records (EMR). it allows users to view, search, and manage patient records. It features functionality such as adding/editing patient records, filtering data by doctor and department, and exporting records. The primary use case is to automate the process of medical record management, ensuring efficient and reliable operations for healthcare providers.

## **Technology Stack:**

Automation Tool: Cypress (for testing)

#### **Key Features:**

- Patient Record Management: Add, edit, and delete patient records.
- Filtering and Search: Search medical records by date range, doctor, department, and more.
- **Export Functionality:** Export records for offline access.

#### **Expected Outcomes:**

- Automate key healthcare operations like patient record handling, filtering, and validation.
- Ensure the accurate retrieval and modification of medical records, enhancing operational efficiency.

### Overview of the application

Pages/Features that are to be focused for the application

Please use the Application URL <a href="https://healthapp.yaksha.com">https://healthapp.yaksha.com</a>

## **PROBLEM STATEMENT**

Need to automate the following activities using cypress+javascript

You will be given few Json files in fixtures folder like dateRange.json, invalidJson.json, loginData.json and patientNames.json.

Path	File	Description
\fixtures	dateRange.json invalidJson.json loginData.json patientNames.json	Contains data to read from json files.
PageObjects\Pages	<ul> <li>ADTPage</li> <li>AppointmentPage</li> <li>DispensaryPage</li> <li>LaboratoryPage</li> </ul>	<ol> <li>All core activities to be performed here.</li> <li>The comments associated with each templated method here</li> </ol>

Mymedic automation using cypress

<ul> <li>LoginPage</li> <li>PatientPage</li> <li>ProcurementPage</li> <li>RadiologyPage</li> <li>SettingsPage</li> <li>UtilitiesPage</li> </ul>	describe the expectation.  3. Declare any variable/object you need to share data/status between different methods.  4. Do not modify the signature of methods declared here.
---	--

# Here's a detailed table format for the test cases to be tested

Test Case No.	Test Case Name	Test Steps to be performed	Path & Method Used	Expected Result
	Verify Login with Valid Credentials	3. Perform login method will perform authentication with the username and	Reference path \PageObjects\Pages \LoginPage methods performLogin()	Successfully logs in with provided credentials. The user is logged in the admin page.
		It is must to implement this login functionality at first and then implement any other test case.		
1	Verify Page Navigation and Load Time for Billing Counter	1. Use verifyBillingCounterLoadState() to check module load. 2. Open "Change Billing Counter" module using ChangeBillingCounter. 3. Set acceptable load time: 1000ms. 4. Verify counter presence; select the first counter if available. 5. Log a message if no counters are found.	UtilitiesPage	Navigates to "Change Billing Counter". Proceeds if counters are available and loaded within 1 second; logs a message otherwise.
2	Patient Search with Valid Data	1. Navigate to Appointment page. 2. Use verifypatientName() to verify the first patient is present or not. 3. Patient name must be fetched from patientNames.json file. 4. Validate that search results contain the searched name.	AppointmentPage	Displays patient name in search results. Ensures short name matches the searched data.
3	Activate Counter in Dispensary	y() to:	Reference path \PageObjects\Pages \ DispensaryPage	Counter activation message matches the selected counter name.

Test Case No.	Test Case Name	Test Steps to be performed	Path & Method Used	Expected Result
4	Purchase Request List Load	1.Use verifyAllElementsVisible() to check verify of elements:     purchaseRequest,     purchaseOrder,goodsArrivalNotific ation, quotations,     settings,     reports,     favoriteButton,     okButton,     printButton,     firstButton,     previousButton,     nextButton,     lastButton,     lastButton.	Reference path \PageObjects\Pages \ ProcurementPage methods verifyAllElementsVisible()	All elements are present and visible on the procurement page.
5	Verify Error Message While Adding New Lab Test	<ol> <li>Navigate to Laboratory &gt; Settings.</li> <li>Select "Add New Lab Test".</li> <li>Click "Add" without providing inputs.</li> <li>Capture and verify the error message: "Lab Test Code Required".</li> </ol>	Reference path \PageObjects\Pages \ LaboratoryPage methods verifyErrorMessage()	Error message: "Lab Test Code Required" is displayed.
6	Handle Alert on Radiology Module	1. Navigate to Radiology module and select "List Request" sub-module. 2. Apply filter using fromDate. 3. The application should read the data from dateRange.json file for fromDate and toDate. 3. Click "Add Report" button. 4. A pop-up will open. Then click on X button to close the pop-up. 5. Now an alert will show up. You need to handle that. 6. Verify and accept the alert if the message is "Changes will be discarded. Do you want to close anyway?". 7. The application should check for matched data.	Reference path \PageObjects\Pages \ RadiologyPage methods performRadiologyRequestAndHandle Alert()	Alert dialog matches expected message and is accepted. Return a Cypress chainable that resolves to true if the alert is handled successfully
7	Search Functionality	<ol> <li>Navigate to Patient Section.</li> <li>Fetch all patient names as an array from patientNames.json file.</li> <li>Use the search bar to find patients.</li> <li>Compare retrieved names with expected names from json file.</li> <li>Log success or failure for each match.</li> </ol>	Reference path \PageObjects\Pages\PatientPage methods searchAndVerifyPatients()	Matches all patient names from Json.
8	Error Handling and Logging in Purchase Request List	Navigate to Procurement module.     Apply invalid data filter in formation.		Triggers and verifies the error message for invalid date range. Logs success for match; failure for mismatch.
9	Modular Script for Patient Search	Navigate to the Appointment section.     Use searchPatientInAppointment() to execute the search.     Validate the patient search result.	Reference path	You should be able to search patient search data.

Test Case No.	Test Case Name	Test Steps to be performed	Path & Method Used	Expected Result
		execute the search. 6. Validate the patient search result. 7. Navigate to the ADT section. 8. Use searchPatientInADT() to execute the search. 9. Validate the patient search result.	\PageObjects\Pages \ AppointmentPage \PageObjects\Pages \ PatientPage \PageObjects\Pages \ ADTPage  methods  searchPatientInAppointment() searchPatientInPatientPage() searchPatientInADT()  We have created searchPatient() method present in reusableMethod	
10	Verify 'Morning Counter' selection and report generation for the specified date	1. Navigate to dispensary module. 2. Click on Reports. 3. Click on User Collection report to navigate to the respective report section. 4. Read the fromDate from dtaeRange.json file and enter in From Date input field. 5. Select morning counter from dropdrown. 6. Click on Show Report button to generate the report. 7. Verify the generated report correctly displays the morning counter in counter column.	Reference path \PageObjects\Pages \ DispensaryPage methods generateMorningCounterReport()	Verify the generated report correctly displays the morning counter in counter column.
11	Verify the tooltip text on hover of Star icon in Laboratory	Navigate to Laboratory module.     Hovers over star icon and waits for tooltip to appear.     Verifies the visibility of the star icon	Reference path \PageObjects\Pages \ LaboratoryPage methods	Verifies the visibility of the star icon and retrieves the tooltip text. Result should be "Remember this date".
12	Add and Verify New Imaging Type in Radiology	button to open the modal for adding a new imaging type.	verifyStarTooltip()  Reference path  \PageObjects\Pages \ SettingsPage  methods  addAndVerifyNewImagingType()	Verifies that the newly added imaging type appears in the list of imaging types.
13	Web Element Handling for Dropdowns in Purchase Request	<ol> <li>Navigate to Purchase Request List.</li> <li>Fetch the fromDate and toDate from dateRange.json file.</li> <li>Apply date range filter.</li> <li>Retrieve dates from "Requested Date" column and validate each date within range.</li> <li>Wait for success or failure.</li> </ol>	Reference path \PageObjects\Pages \ ProcurementPage methods  verifyRequestedDateColumnDateWit hinRange()	It should be able to retrieve dates are within range.

Test C		Test Steps to be performed	Path & Method Used	Expected Result
14	Verify logout functionality from Admin dropdown	https://healthapp.yaksha.com/Home/In dex#/ 2. Click on the "Admin" dropdown 3. Click on "Log Out" option. 4. Verify the user is redirected to the	\PageObjects\Pages\LoginPage	User is logged out successfully and the login page is displayed.

Learners will gain experience in building strongly-typed applications using React.js and managing data flow with **JavaScript**. They'll learn how to define interfaces, use types for error prevention, and improve code maintainability.

With **Cypress**, learners will learn to write and execute automated tests for the <a href="https://healthapp.yaksha.com">https://healthapp.yaksha.com</a>

app. Key skills include:

- Browser Automation: Interacting with web elements and testing multiple browsers.
- Assertions & Validations: Ensuring app behaviour meets expected results.
- End-to-End Testing: Automating real user interactions and validating overall app functionality.

## IMPLEMENTATION/FUNCTIONAL REQUIREMENT

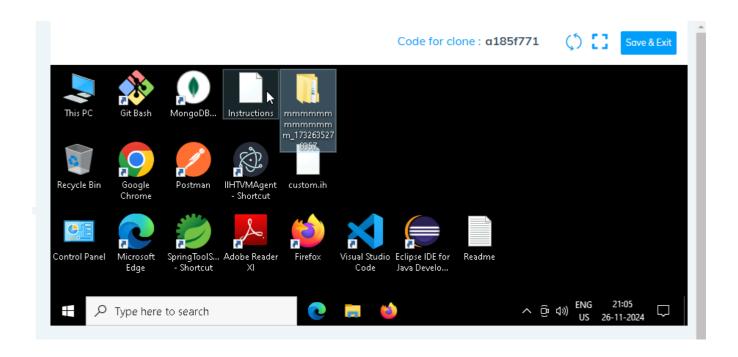

## 1.1 CODE QUALITY/OPTIMIZATIONS

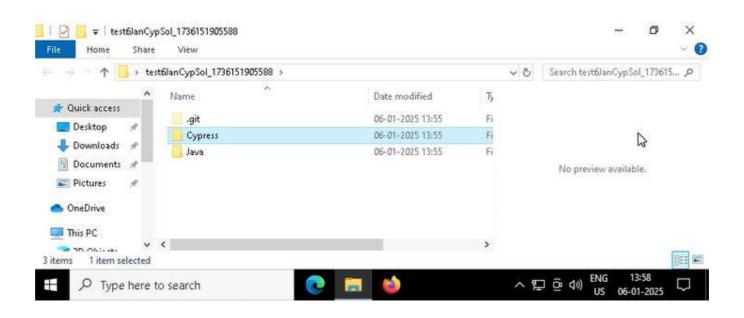

- 1. Associates should have written clean code that is readable.
- 2. Associates need to follow SOLID programming principles.

## **Execution Steps:**

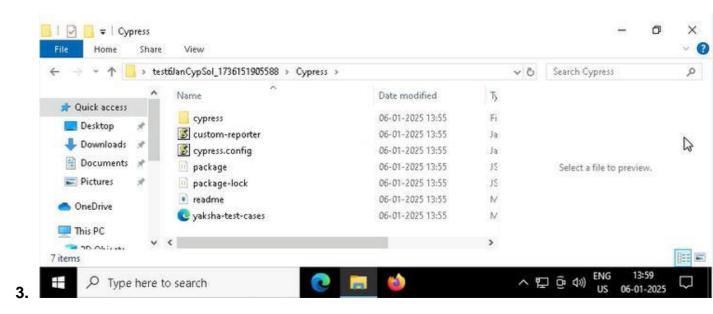

## **Steps for Execution:**

1. Please open the folder created on desktop with the email name you used to login.

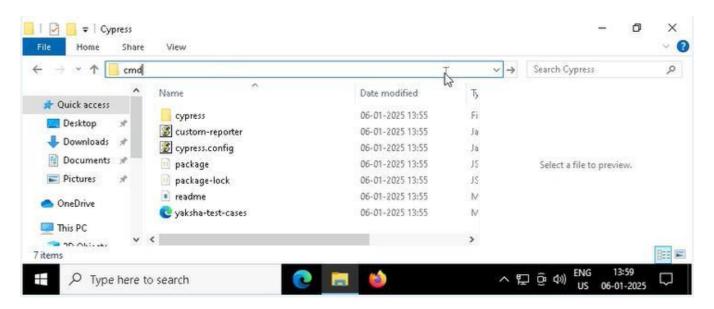

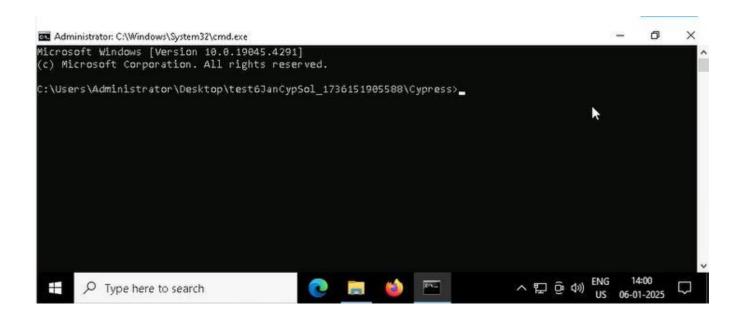

## 2. Go into the Cypress folder

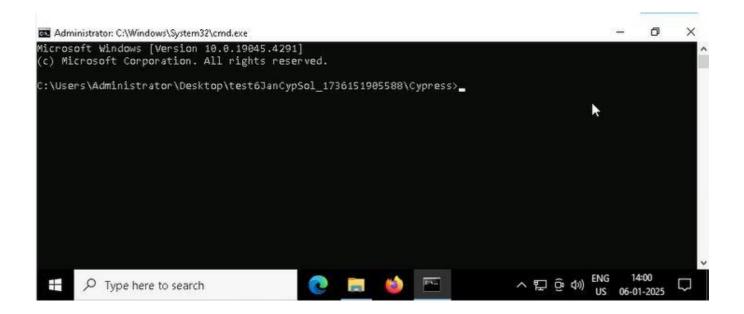

4. Open command prompt with its location and use below command:

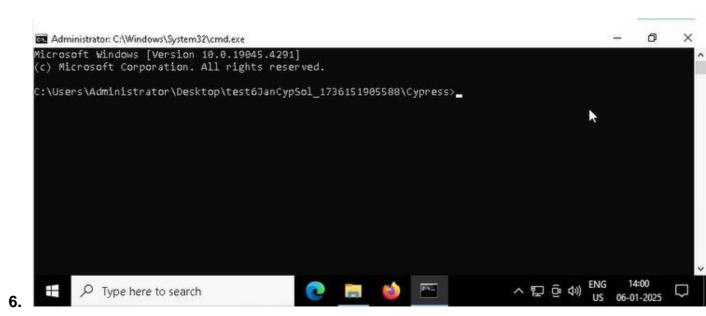

code.

5. Once VsCode is open. Please open the terminal in Cypress folder:

1. Install all dependencies in the Cypress folder path using:

npm install

2. Run the following command to open the interactive Cypress Test Runner in the Cypress folder path:

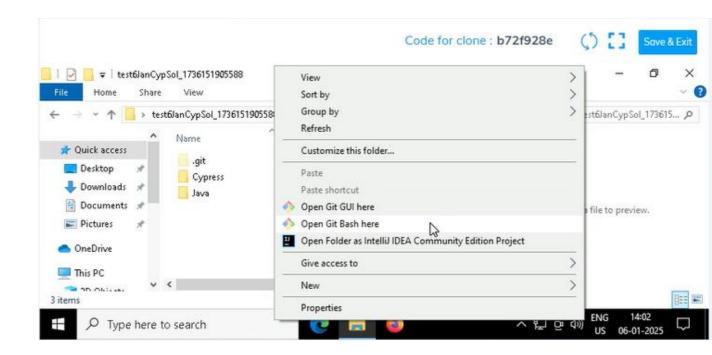

npx cypress open

3. Run the following command to run test cases in headless mode in the Cypress folder path:

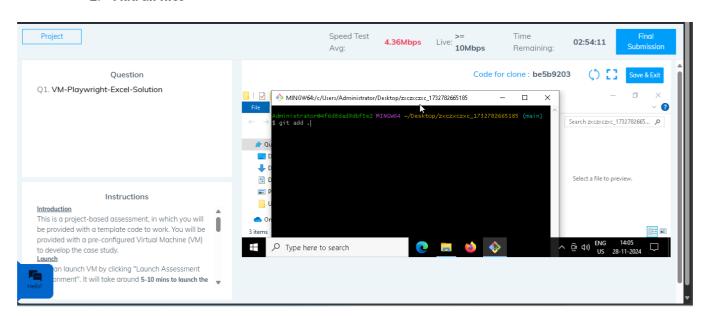

npx cypress run

4. Once you have executed the test cases. Now it is necessary to push your code to git. For this, please go inside the folder created on desktop with the email id you have used to login and then:

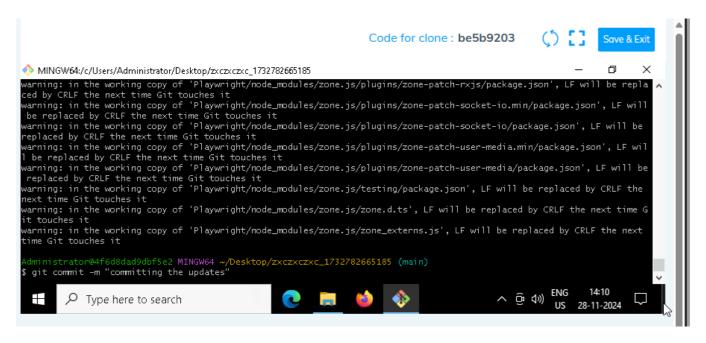

1. Open gitbash

#### 2. Add all files

#### 3. Commit the changes

#### 4. Push the changes
